How is nutritious instant porridge made?

Detail Introduction :

With the acceleration of the pace of life, various instant foods have become the favorite foods of mod consumers. Nutritious instant porridge is a kind of nutritious instant food that is very convenient to e be eaten immediately after brewing with hot water or milk. And the nutrition is also very rich.

Nowadays, many manufacturers have entered this industry, because nutritious instant porridge has broad development prospect, which contains huge business opportunities. Before starting this busin first need to understand how nutritious instant porridge is made. Only by mastering the most advanc production technology can you gain a place in the market.

How is nutritious instant porridge made?

The production of nutritious instant porridge requires the use of advanced production technology. O way can the produced food have rich nutrition. The Nutritional Instant Porridge Processing Line is a production line with a very high praise in the industry. It integrates raw material mixing, extrusion, Pu drying, grinding and packaging are integrated, and the production efficiency is very high.

The specific preparation method of nutritious instant porridge:

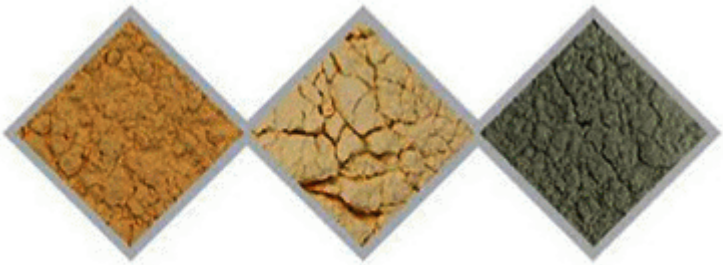
First, select various raw materials, including corn, oats, rice, yam, millet, wheat, konjac, etc., as well as beans such as black beans, red beans, barley, black sesame, etc., and match them according to the fo formula. After adding a certain amount of water Stir it well.

The evenly mixed materials need to be conveyed into the twin-screw extruder, where the deep proce carried out to make the raw materials into puffed food. Extrusion technology is the most important technology in the entire production line, which will greatly affect The nutritional content and taste of product.

The prepared food has a relatively high moisture content and needs to be dried in a dryer. After the r is lost, it becomes drier, which can effectively increase the storage time.

Next, you need to grind the prepared food. The equipment used is a milling machine, and the size of polished particles is adjustable, so that you can make nutritious instant porridge with different tastes

After being ground into powder, the nutritious instant porridge is made, and finally it can be package packaging machine.



The above is the specific production method of nutritious instant porridge. It can be produced very w using the nutritious instant porridge production line. The production line is composed of a variety of equipment. It adopts a building block structure system and is flexible in use. Not only can the whole p be used directly In the production line, one of the equipment can also be used alone, and the floor sp very small, which is very suitable for some small and medium-sized enterprises.

The production line has a highly automated production method, high production efficiency, good pro quality, and the equipment is made of 304 stainless steel, and the accessories are made of internatio renowned brand components. The quality of the equipment is second to none in the industry, and th operation is stable, and it can achieve 24h continuous The most important thing is the low price of ec no pressure for small and medium-sized enterprises, low investment, and high return. This productio has become one of the most popular production lines in the modern food processing industry by virt many advantages.

Nutritional Instant Porridge Processing Line can bring manufacturers the most advanced production technology and the highest production quality, which is an ideal choice for expanding the market. If y want to achieve better development in this industry, welcome to contact us, we can provide you with customized services, escort your career, and look forward to cooperating with you!
