### What Is a Continuous Fryer?

The electric batch fryer nuts cashew frying machine is a large frying machine with mesh belt structure. Electric batch fryer nuts have the advantages of large output and convenient operation, and are widely used in cashew frying machines and electric batch fryer processing lines. In addition, all parts of the electric batch fryer are made of 304 stainless steel.

### Application for Tempura Shrimp deep fryer machine

Continuous fryer is mainly suitable for larger food production enterprises, and the applicable products include: Broad beans, green beans, peanuts and other nuts; puffed food such as rice cakes and potato chips; rice noodles, cat ears,, twist and other flour products; meat products such as meat pieces and chicken legs; aquatic products such as yellow croaker and hairtail; soy products such as dried tofu and bean curd, etc.

### Features&Advantages of Continuous Fryer Tempura Shrimp deep fryer machine:

| Features&Advantages of Continuous Fryer Tempura Shrimp deep fryer machine |                                                                                                                                                                                                    |
|---------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1.                                                                        | Frying machine is suitable for continuous food production with high output.                                                                                                                        |
| 2.                                                                        | The products are layered between upper and lower mesh belt so as to avoid floating when they are fried in frying oil.                                                                              |
| 3.                                                                        | The transmission system of the frying machine is designed as frequency stepless speed regulation, this can help the operator to control the frying time freely.                                    |
| 4.                                                                        | The equipment is equipped with automatic lifting system, help the mesh belt to be cleaned more easily.                                                                                             |
| 5.                                                                        | Automatic scraping system can continuously take away the oil residue produced in the frying process from the bottom, this can keep the frying oil clean and extend the service life of frying oil. |
| 6.                                                                        | Multi group temperature control system, can save more electricity consumption.                                                                                                                     |
| 7.                                                                        | Unique temperature control panel, make operating easy, simple and safe.                                                                                                                            |
