Fish food production line

Detail Introduction :

Fish feed machines can be used to produce various fish feeds. We will design molds of different shapes a
to the customer's specific requirements for the shape of the target product.
We provide two types of fish feed extruders: dry and wet. From feeding, extrusion, cutting, drying, oil spra
packaging, the finished product production is completed automatically at one time. This production line ha
characteristics of various models, flexible equipment configuration, wide range of raw materials, rich variet
products, and easy operation. It can greatly improve the production efficiency and quality of fish feed and
fish growth. It is the best choice for the pet food production industry.
