Customer Factory Site Of The Industrial Chicken Deep Frying Processing

The continuous fryer machine can be heated by electricity, oil, gas and coal. In order to prevent excessive oxidation of the oil, our fryer heats the central part of the oil layer and controls the temperature of the upper and lower oil layers. The continuous fryer has a double-layer belt, which can evenly fry the product. The product is fried between the two layers of steel wire belts so that it cannot run freely. The stainless steel ribbon can convey products at an adjustable speed. In order to extend the life of the oil, our continuous fryer can automatically filter the oil and control the temperature of the oil during the continuous food fryer.

Advantages of Automatic Deep Fryer Machine With Temperature Control

The Advantages of the Boasted Crispy Chicken Industrial Deep Fryer Machine

The frying machine uses the principle of different proportions of oil, water, and animal oil to sink all the residues produced during the working process into the water, and the animal fat sinks into the lower layer of vegetable oil. It fundamentally solves the problem of residues, animal fats, and repeated frying in the traditional frying machine that acidify and carbonize the frying oil and deteriorate and produce carcinogens.

- 1 Improve quality and ensure health. The special process keeps residues and animal fats out middle can effectively control the convection of the upper various oil layers.

2	Save frying oil, which is conducive to environmental protection	The oil-water mixing technology continuously produces a under the oil layer. The central heating process can be adjusted, the electric control device can control the upper and lower temperatures to alleviate the oxidation degree of the fried oil, thereby prolonging the life of the machine.
3	The oil does not smell, one machine is multi-purpose	The process uses limit control, zone temperature control, and automatic vegetable oil and animal oil. The animal oil leached from the bottom layer of the vegetable oil, so that the middle and upper work
