

Heart Shaped Pet Cookies/dog biscuit making machine

Detail Introduction :

The dog biscuit production line is a comprehensive system that integrates mixing, shaping, baking, and packaging processes. It begins with a mixer where ingredients are blended to perfection. Next, a molding machine shapes the dough into various heart-shaped and pet-friendly designs. The biscuits are then baked in an oven to ensure they are both crispy and nutritious. Finally, an automatic packaging machine ensures each batch is securely sealed and ready for market. This automated line guarantees consistent quality, high efficiency, and meets the diverse needs of pet owners.
