Detail Introduction :

How to make baby food?

How do you manually make infant food?

How does the factory produce baby food?

In the baby's growth stage, simple breastfeeding is difficult to meet the baby's nutritional demand, so an appropriate amount of adding complementary food is very necessary. When the baby just contacts food, baby rice flour is the most suitable choice. The first stage of the baby rice noodles is single, and the amounts are low, it is very suitable for the baby.

Such baby food is also a kind of food that is the highest purchase rate of parents. In order to further ensure the health standards of food, many parents will choose their own production, then how should we make baby food?

How do I make baby food with mass?

Baby food is a kind of food that the baby must eat during the baby period, and the market demand is very high. There are two kinds of production methods. You can choose your own production, you can also buy directly from the store, and baby food in the store is produced using professional production equipment.

Generally, the food is suitable for baby rice noodles, carrots, mashed potatoes, apple puree, minced chicken, animal liver, boiled green beans, bowl, broccoli, tomatoes, etc. If you don't know what kind of food should be made to your baby, you can choose the above.

How do you manually make infant food?

1. Soak the rice for more than 2 hours, and remove it in the stirrer.

2. The mixer adds any kind of vegetables or fruit, stirring the mud lake.

3. Pour in the milk pot to add an appropriate amount of water, while heat while stirring with a spoon, into a sticky paste. You can add potatoes, pumpkins or carrots, green vegetables, etc., you can add sh such as the baby's taste, the big baby, etc., such self-made rice noodles are fresh and guaranteed, and practice is simple.

If you just want to make some vegetable puree, you can clean the carrot, potato, etc. Put it in the pot pan, until it is ripe, then remove it in the bowl, then press the mud.

But many parents have to make food for their baby because they have been working busy. So they w most convenient way from the store. And baby food in the store is produced by the factory using high production equipment. Formulation, nutrition is more comprehensive, and it is also cleaner.

How does the factory produce baby food?

1. Reasonably prepare the raw material according to the formula, add vitamins and minerals, etc., mi in the mixer.

2. Further processing by extruders, produce raw materials into puffed food.

3. Transfer the raw material to the dryer for drying, remove moisture, and extend the shelf life.

4. Grind the dried food into powder.

5. Finally, after packaging.

The above is two ways to make baby food. But for the baby's health, it is not recommended that you make many baby foods in one time. And it is very easy to breed bacteria for a long time. The factory-made baby food has a very stringent production standard. And the production process has no pollution, and the quality will be rest assured.
