# Professional Textured Soya Protein Making Machir With Custom-Design Service

## **Detail Introduction:**

Introduction of Textured Soya Protein Making Machine:

Textured Soya Protein is a food or food ingredient with higher protein, produced by processing with protein-containing substances as the main raw material. It is generally a dry substance, and raw materials are mostly used in soybean propoducts, such as defatted soybean flour, protein concentrate, isolated protein, gluten powder, etc. Shapes are granular columnar, block, etc. Advanced tissue protein is produced with isolated protein, which has high protein content and it absorbed. Because it is a vegetable protein, it has no veterinary drug residues and is safer. It is widely used. It is used meat products. High-grade Textured Soya Protein protein is filamentous Textured Soya Protein protein, which is obverehydration and feels like shredded meat, and the cost is lower compared to meat. Textured Soya Protein can replace isolated protein added to meat products, not only can improve the protein content of meat products, but also can absorbed, so that it is not greasy and more meat, to achieve the purpose of economic benefits. The protein content of Texture Protein can only indicate high nutrition, but does not indicate full nutrition. For meat substitutes, it should also contain acids similar to those of meat.

The whole Textured Soya Protein production line can automatically complete the production from m extruding, air conveyor, multi-layer oven, cooling conveyor to the finished product.

# Details of the production line

Production capacity	180-1000kg/h			
Electricity supply	Customised according to your local electricity situation.			
Machine details	1. Stainless steel,201, 304, 316, on request.			
	2. Electrical components can be ABB, Delta, Fuji, Siemens, famous			
	brands.			
Certificates	CE,GOST,TUV,BV,SGS			
Raw material	Defatted soybean meal			
Applications	Meat products industry, fast food production, and all kinds of			
	vegetarian snacks and food.			

# Flow chart of a commercial Textured Soya Protein processing line:

Mixing Machine - Screw Conveyor - Twin Screw Extruder - Air Conveyor - Multi-layer Oven- Cooling Machine

## Flow chart:

Our engineers can design the layout diagram of the Textured Soya Protein according to the customer's factory size.

# Features of the Textured Soya Protein Production Line

- 1.Productivity: automated system for controlled and stable production on a continuous basis, easy and quick product automatic start-up, simple cleaning and maintenance procedures.
- 2. Economical: low investment, quick results.
- 3. Environmental protection: moderate output and energy saving.
- 4.Intelligent control system: PLC control of production to ensure optimum process parameters for each recipe.
- 5. Automatic lubrication system can reduce power consumption and prolong service life.

Parameters of the Textured Soya Protein Production Line

Model	Installed Power (KW)		Capacity (kg/h)	Dimension (m)
LY65 Textured Soya Protein Production Line	100	80	180-220	19000*1200*1800mm
LY70 Textured Soya Protein Production Line	109	93	250-300	20000*1200*2200mm
LY85 Textured Soya Protein Production Line	156	125	300-500	21000*1200*2200mm
